

Aurionpro implemented AP, GL, iExpenses and AME with Oracle's WebCenter solution, using AP automation.

Leading Provider of Analytics and Services

Oracle WebCenter Solution Accelerator implementation

Challenge:

- Replicate third party barcode generator
- Coordinate multiple teams and products
- Extensive functional requirements workshops
- Provide visibility into active and historical invoices

Solution:

- Develop web-based barcode generator
- Integrate GL, Vendor Management and iExpense
- Use best practices for project planning
- Create robust, real-time Business Activity Monitoring (BAM) dashboards

Results:

- Deploy custom barcode generator
- Perform transition from third-party capture software
- Deliver via clear project roadmap
- Achieve significant business value

As Aurionpro partnered with this leading provider of analytics, it was immediately apparent that both organizations held a common vision for the value that Oracle WebCenter delivers. More than just a transition project, this solution encompassed multiple components of Oracle WebCenter, including: AP, GL, iExpense, and Vendor Management. After studying the benefits of both systems, the client chose to move all their financial processes to Oracle's WebCenter. The project included migration from an antiquated competitive product to WebCenter, enabling content accessibility to various financial processes.

Aurionpro employed multiple methodologies to make this project successful. Requirements gathering workshops enabled Aurionpro to identify project scope and direction. The client team, experienced in WebCenter development, collaborated with Aurionpro through both design and development. Additionally, a functional requirements workshop, conducted separately from the development engagement, resulted in a comprehensive project plan and smoother implementation. Aurionpro's skillset in areas beyond just AP enabled integration of GL, iExpense, and Vendor Management for maximum data flow.

As the teams worked together, Aurionpro furnished the configuration and implementation of the "Out-of-the-Box" Oracle WebCenter AP Solution while the client team focused on modifications. The overall implementation produced exceptional results which are now considered by both organizations to be a best practice.
